MEMORANDUM FOR:	Chief, Legislative Division Office of Legislative Liaison
FROM:	Director of Security
SUBJECT:	H.R. 4681 - "Federal Polygraph Limitation and Anti-Censorship Act of 1984"
REFERENCE:	Memorandum from OLL dated 10 February 1984, OLL 84-0592, Subject: H.R.4681- "Federal

Polygraph Limitation and Anti-Censorship Act

With regard to your requests for comments regarding H.R. 4681, the Office of Security offers two observations:

of 1984"

A. First, Section 6 of H.R. 4681 exempts only "employees" of CIA and NSA from the provision of the Bill. It should be noted that a literal interpretation of Section 6 would allow only Staff Employees of this Agency to participate in the CIA Polygraph Program. This exemption of H.R. 4681 would not allow CIA to include Military Detailees, Contract Employees and other classes of non-staff individuals who would enjoy staff-like access to CIA facilities and classified information. Additionally, the exemption would appear to exclude contractor's employees from participating in the CIA Industrial Polygraph Program. The Office of Security would prefer the addition of language in Section 6 which would allow an exemption to CIA Staff Employees and non-staff employees (including contractor's employees) who will have staff-like access to either CIA facilities or classified information.

B. Second, the section of the Bill entitled "Findings" contains language that contradicts this Agency's experience with the polygraph and appears to inaccurately paraphrase the Office of Technology Assessment's November 1983 polygraph study. Specifically, subparagraph (1) of H.R. 4681 states that, there is no scientific evidence to demonstrate the validity of polygraph testing for screening purposes. Subparagraph (2) states that the use of the polygraph for

screening purposes will result in large numbers of people being labelled as "false positives". Neither of these assertions is supported by Office of Security statistics. Furthermore, the Office of Technology Assessment report does not make such a sweeping statement. The OTA study does reflect that there have been no widely-accepted scientific studies of the polygraph which categorically assert that the polygraph is invalid.
